Euroson America, Inc. Announces the Release of UDO (Ultra Density Optical) Support in PoINT Jukebox Manager V4.1

*The Industry's leading Jukebox Management software now includes support for 30GB
Ultra Density Optical media, drives and libraries from Plasmon*

Tuesday, September 28, 2004: Euroson America, Inc., North American Distribution partner for PoINT Software & Systems, announces that PoINT Jukebox Manager V4.1 now includes support for transparent read/write access to write once and rewriteable UDO media, drives and libraries. Support includes mixed-mode UDO / MO libraries.

UDO, Ultra Density Optical is the newest generation of optical storage technology for the Professional Data Storage market. With individual media capacity of 30GB, and Libraries capable of storing 1TB to over 19TB of data, UDO provides significant advantages in capacity, performance and cost compared to all previous optical technologies.

PoINT Jukebox Manager Version 4.1 now provides complete support for all UDO devices, including write once and rewriteable media and file systems. It allows logical partitioning of UDO libraries and provides UNC path and drive letter access to the device. Additional features provide media spanning and volume sets, bar code media support, automated recording and media copying as well as automated file migration.

A key objective in the development of UDO support for PoINT Jukebox Manager was to achieve the high data transfer speeds of UDO technology while utilizing the Universal Disc Format (UDF) file system to maintain media compatibility.

“UDO Technology enabled by the powerful features and high performance of PoINT Jukebox Manager provide the ideal Archival Storage solution for demanding applications and environments” according to Michelle Reu, North American Director of Sales and Marketing for PoINT Software.

“Plasmon is pleased to add PoINT Software to the growing list of vendors supporting UDO Technology. The PoINT Jukebox Manager has a unique set of features and capabilities which extend the functionality of UDO to numerous new markets and applications” stated Dave DuPont, Plasmon VP of Marketing.

A free evaluation version of the software can be downloaded at:

About Euroson America, Inc.

For nearly 15 years, Euroson America has delivered solutions involving CD, DVD and Optical automation systems for a wide variety of applications. Numerous customers from branches of the federal government to financial institutions and even NASA rely on the quality and stability of the PoINT family of products from Euroson to provide automated archiving solutions and on-demand data systems.

About PoINT Software & Systems

PoINT Software & Systems GmbH has played a leading role in the development, and standardization of optical technologies for almost two decades while working as Philips, and later Digital Equipment (DEC). In 1994, this company, with all products as well as licenses and rights to these products became PoINT Software and Systems GmbH of Siegen, Germany. Specializing in software for optical storage technology, solutions for stand alone recorders, autoloaders and jukeboxes, PoINT supports a wide range of technologies, including CD, DVD, PDD, MO, and UDO. Today PoINT Software & Systems has authorized distributors in over 20 countries and installations worldwide. For more information about PoINT Software & Systems visit <http://www.pointsoft.de>
