Euroson America, Inc. Announces the Release of PoINT VJB Software Write Once File system for RAID/Hard Disc

Standards based Write Once file system for Compliant Data Storage

Monday, January 2, 2006: Euroson America, Inc., North American Distribution partner for PoINT Software & Systems, announces the release of PoINT **VJB™** Software.

Incorporating their many years of experience in optical storage and file systems, PoINT Software engineers have developed **VJB™**, Virtual **Jukebox** File System technology. Using proven technologies and reliable file system standards, data can be written with compliant Write Once attributes on to standard hard disc based RAID systems. Data volumes remain accessible from RAID via a secure read only file system and may not be altered or destroyed. Data volumes can be mirrored to DVD media sets which provide redundancy for off sight storage and disaster recovery.

“Based upon the powerful features and high performance of PoINT Jukebox Manager, PoINT VJB provides an ideal archival storage solution for applications and environments requiring a highly accessible write once storage system using standard RAID storage devices” according to Michelle Reu, North American Director of Sales and Marketing for PoINT Software.

“PoINT VJB software creates a safe, compliant write once file system by writing industry standard udf images files onto a RAID storage device. This technology offers cost-effective data storage and management tools designed to address growing regulatory compliance requirements” said Thomas Thalmann, Product Manager for PoINT Software & Systems.

A free evaluation version of the software can be downloaded at:

About Euroson America, Inc.

For more than 15 years, Euroson America has delivered solutions involving CD, DVD and Optical automation systems for a wide variety of applications. Numerous customers from branches of the federal government to financial institutions and even NASA rely on the quality and stability of the PoINT family of products from Euroson to provide automated archiving solutions and on-demand data systems.

About PoINT Software & Systems

PoINT Software & Systems GmbH has played a leading role in the development, and standardization of optical technologies for almost two decades while working as Philips, and later Digital Equipment (DEC). In 1994, this company, with all products as well as licenses and rights to these products became PoINT Software and Systems GmbH of Siegen, Germany. Specializing in software for optical storage technology, solutions for stand alone recorders, autoloaders and jukeboxes, PoINT supports a wide range of technologies, including CD, DVD, PDD, MO, and UDO. Today PoINT Software & Systems has authorized distributors in over 20 countries and installations worldwide. For more information about PoINT Software & Systems visit <http://www.pointsoft.de>
